Section 1: Introduction

National Managed Clinical and Diagnostic Networks (NMCNs and NMDNs) are recognised vehicles for improving the quality of the services they support.

The key responsibility of networks in delivering quality improvement is clearly articulated in the most recent published guidance, CEL 2012 (29), which states, “The role of MCNs in improving the quality and efficiency of services across complex whole systems has become even more important in the current financial climate. MCNs achieve their results through consensus and collaboration, by enabling clinicians, patients and service managers to work together across boundaries to deliver safe, effective and person-centred care.... MCNs are integral to achieving the three Quality Ambitions. They epitomise the ethos of co-operation and collaboration that distinguishes the whole of NHSScotland.”¹

Scottish Government’s core principles of managed networks identify the requirement for:-

- Continuous quality improvement, articulated through an annual workplan to demonstrate intended improvements year on year, quantified from the perspective of the service user
- Expansion of the evidence base through continuous quality improvement and ongoing audit

Diagnostics, whether primary care, community or secondary care delivered, have an important role to play in supporting much of the quality strategy and its ambitions by contributing to early, accurate and cost effective diagnosis, monitoring and self-management.

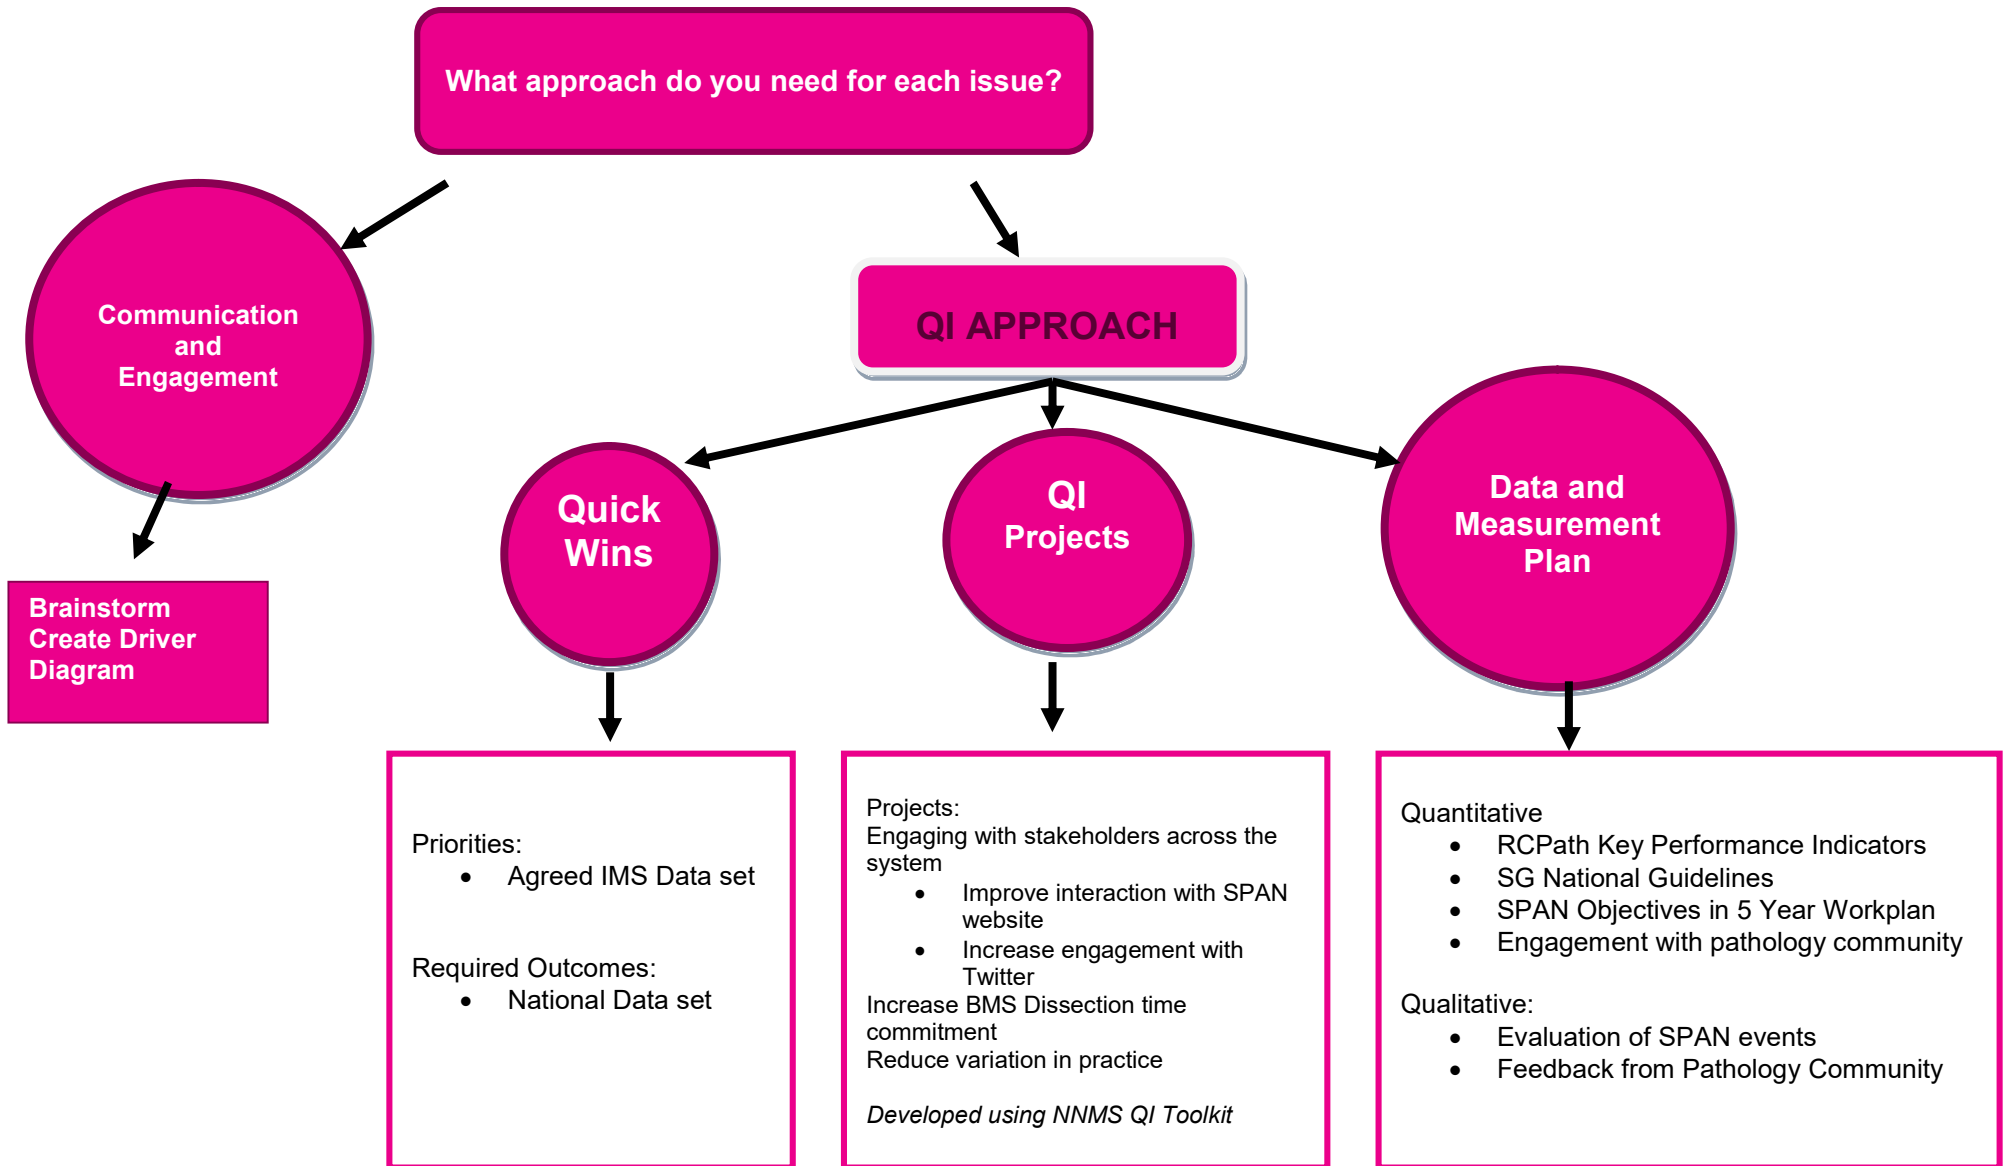

This strategy outlines the approach the Scottish Pathology Network (SPAN) will take to improving quality in diagnostic pathology services.

This strategy complements the strategic vision for the network, which can be found in its five year plan (Annexe 1).

1.2 Network approach

Networks develop five year and annual workplans, based on policy drivers, horizon scanning and identified need for service improvement. From the development of workplans an understanding of the issues to be addressed is developed. How these issues are addressed is contained within this strategy. The network’s identified approach to quality improvement can be illustrated as follows:-

¹ http://www.sehd.scot.nhs.uk/mels/CEL2012_29.pdf

2. Network Vision

SPAN aims to ensure the provision of an innovative, equitable, patient centred, high quality, and clinically effective Pathology service.

Managed Diagnostic Networks are defined as coordinated groups of health professionals that support diagnostic services to continuously improve service delivery, in order to ensure equitable provision of high quality, clinically effective services.

The Scottish Government^{2/3} has identified that diagnostics are central to whole systems service redesign of the NHS in Scotland. Diagnostic Networks drive forward a number of key pieces of national strategic work, including:

- Shared Services
- National Delivery Plan for Healthcare Scientists
- National Clinical Strategy

During 2016-17, in line with NHS Scotland's national commissioning policy, SPAN became the first NMDN to undergo an external review. The purpose of this was to inform a decision on continuing central funding; based on the extent to which SPAN was meeting the needs of its stakeholders, including NHS Scotland's vision for diagnostic services.

This provided the Network with the opportunity to refresh and revitalise its workplan. The review acknowledged that SPAN has added considerable value to services since inception, highlighting the following as successes:

- information sharing between Pathology services
- conduit of essential communications
- contribution to a number of service redesign initiatives
- collection of a sizable data set, providing comparisons on performance and staffing profiles across Scotland and also comparisons with previous years
- tangible engagement and participation from each of the centres, with excellent attendance at meetings and good buy-in throughout.

Areas for improvement have been identified through the SPAN Annual Review. The following key areas could be targeted for quality improvement initiatives:

- Improving turnaround times (productivity) for cellular laboratories
- Testing of Digital Pathology
- Improving stakeholder engagement across the whole system
- Using data to make quality improvements

² A National Clinical Strategy for Scotland 2016

³ Realistic Medicine Chief Medical Officer's Annual Report 2014-2015

The review highlighted areas of concern in the Network's performance, most notably engaging with a range of stakeholders, including at a strategic and operational level, to improve SPAN's ability to effect change.

The review identified that SPAN should improve its communication and engagement within the Pathology community and with its external stakeholders such as service users. Therefore, in December 2016, SPAN issued its first quarterly newsletter. A communication and engagement strategy was produced, which was endorsed by the SPAN steering group. The Communication Strategy is reviewed annually to measure progress against objectives.

Priorities are reflected through the following activities in the five year plan for years 2017-2022 (Annex 1).

3. Quick Wins

Quick Wins are improvements that have high value to the network but are manageable and inexpensive to implement. The Quick Wins should motivate the network and be communicated to stakeholders about the improvements that are producing results.

The point is to:

- Show results and success quickly and communicate this widely
- Motivate the network by doing something early
- Demonstrate to stakeholders that the network is going to make improvements
- Support the overall improvement targets – the five year workplan
- Choose Quick Wins that will be visible
- Look for Quick Wins that can be easily solved with current resources

4. QI Projects

In 2020, SPAN plan to undertake a number of QI projects. SPAN is continuing to work with the pathology community to increase BMS dissection in Scotland. (Annex 2).

5. Data and Measurement Plan

A Data and Measurement plan has been developed to measure progress against the SPAN workplan. The plan includes process measures (aiming to improve reliability), outcome measures (improving the patient experience) and balancing measures (how improvements in one area may have unintended consequences for another area). (Annexe 3).

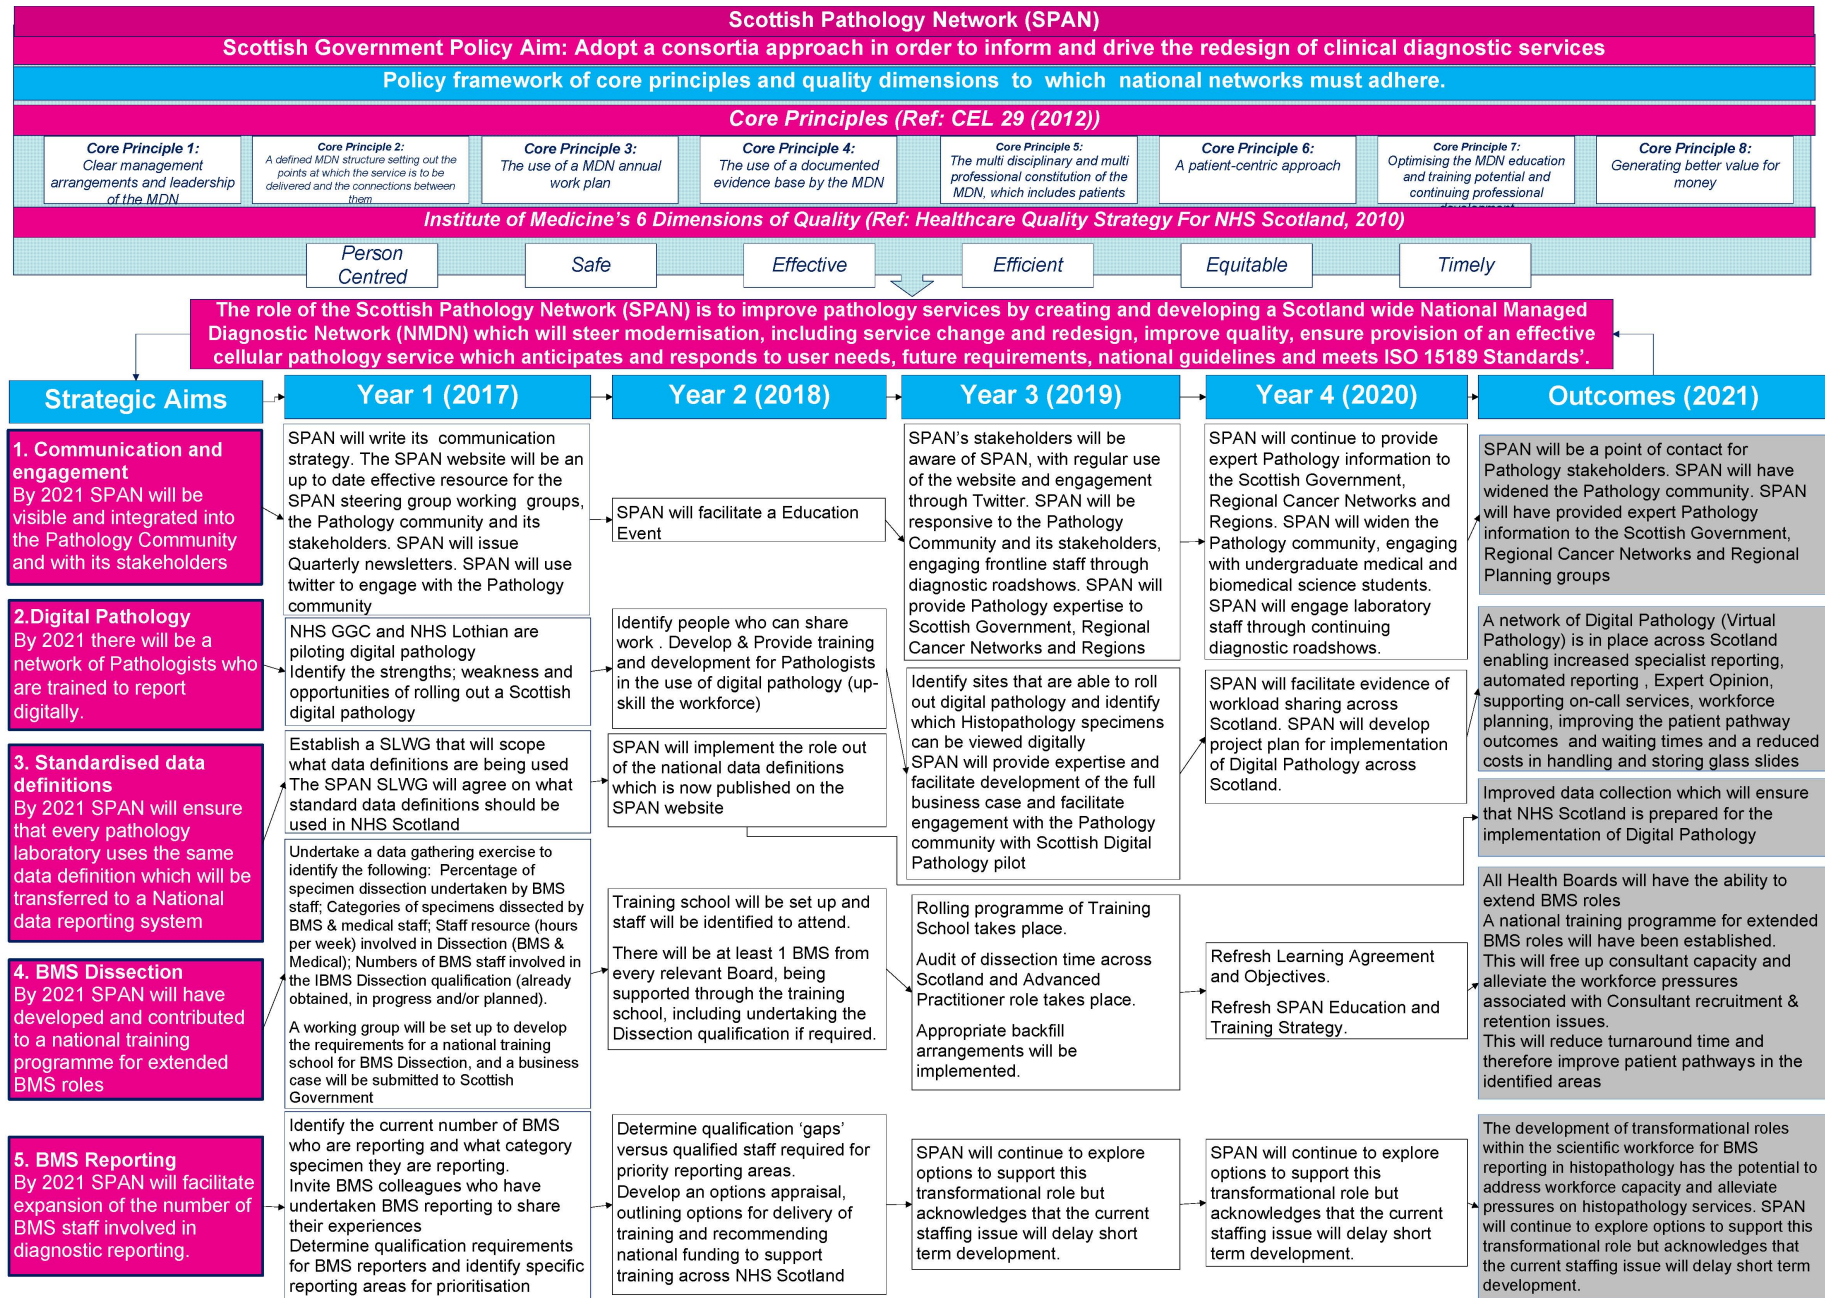

Measures include:

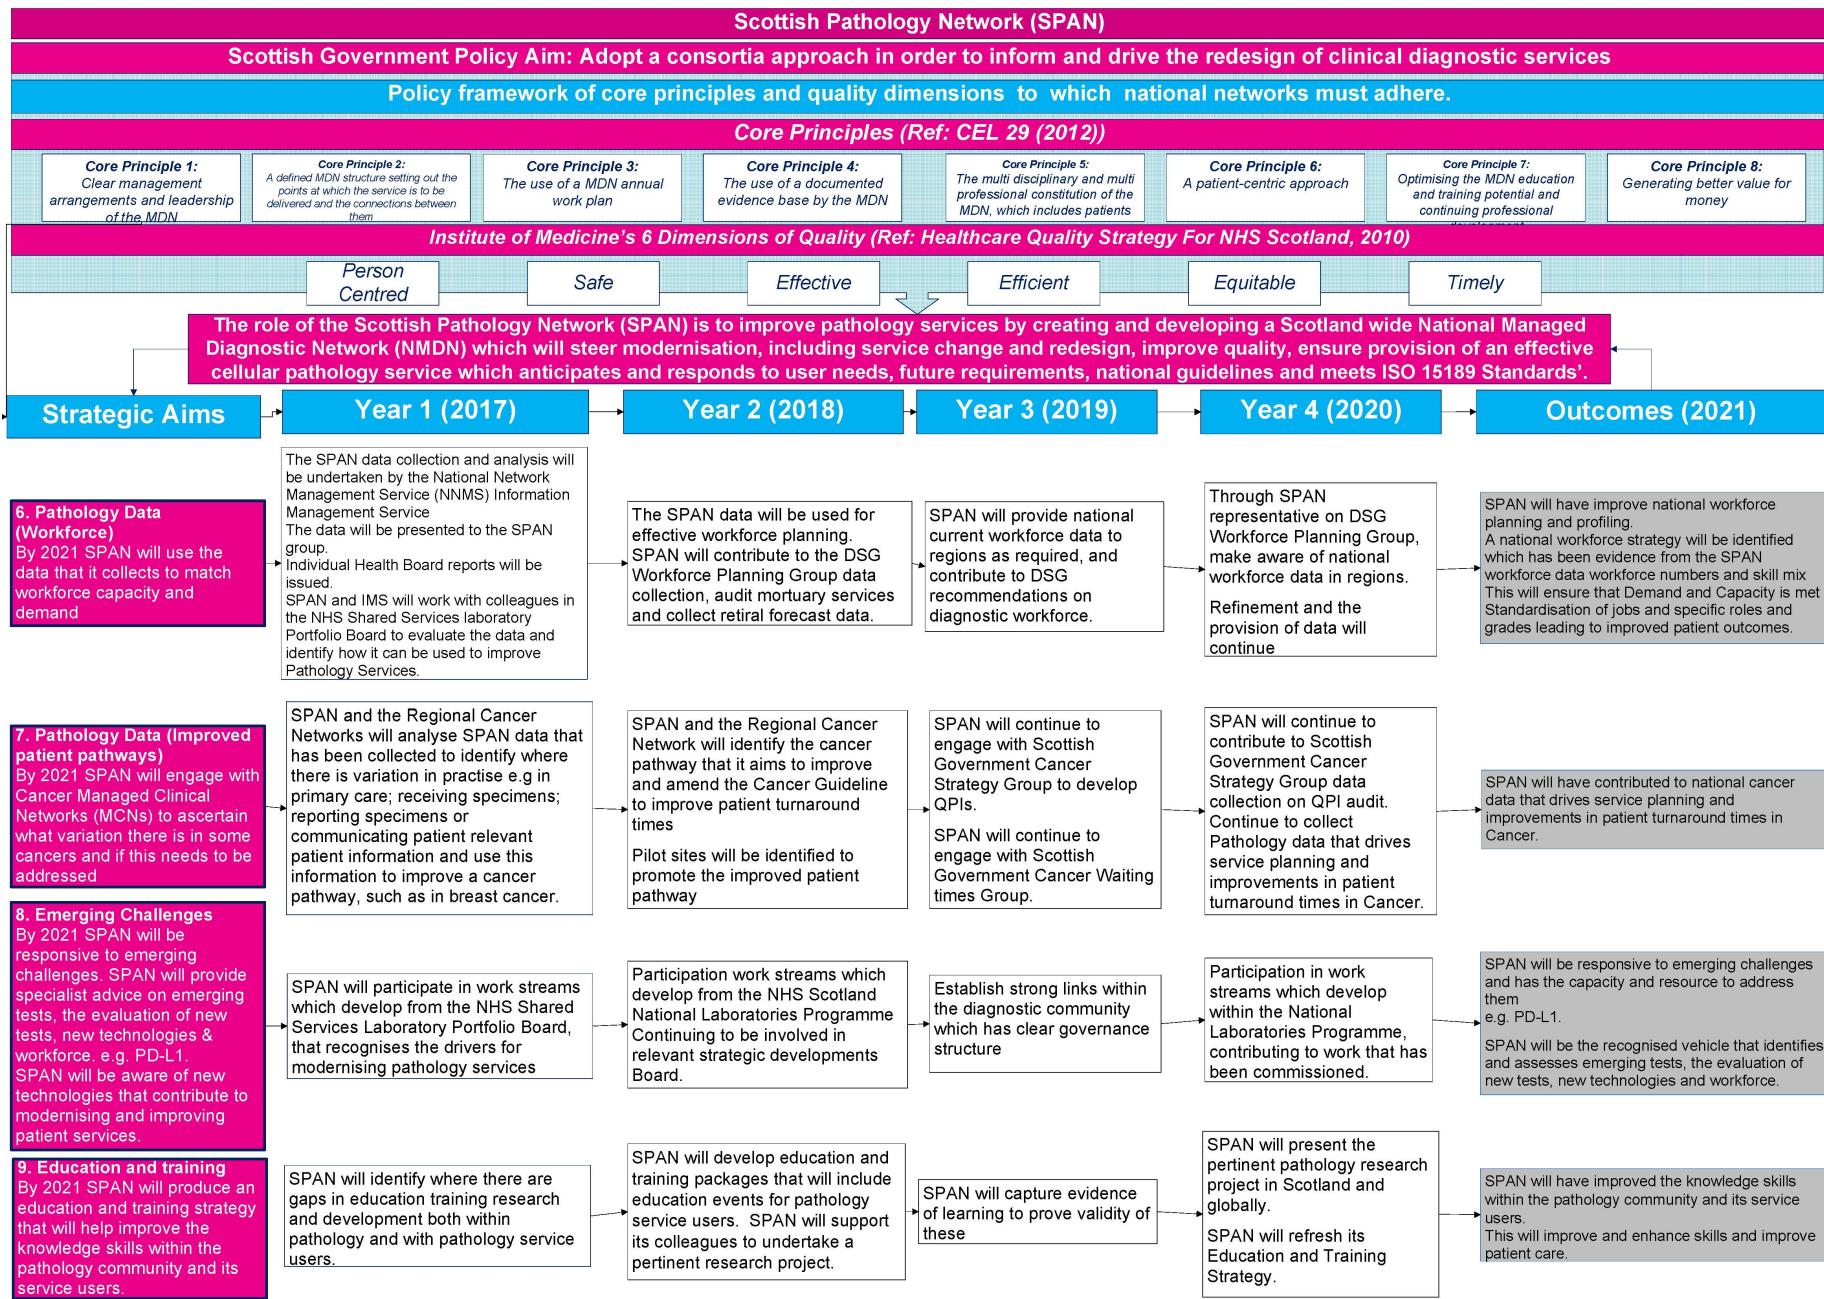

- Quantitative data e.g. quality and performance data generated by NHS Boards and managed through IMS
- Quantitative data relating to time commitment for pathological dissection
- Quantitative data relating to engagement with the pathology community
- Qualitative data work e.g. stakeholder feedback, evaluation of SPAN events
- Quality Indicators/RCPATH Key Performance Indicators relating to Biopsy Turnaround Times, Reporting Times
- Relevant national guidelines including Scottish Government recommendations for mortuary services, post-mortem reporting
- Identification of local QI projects e.g. appendix dissection practice

Annexes

1. SPAN Five Year Workplan
2. QI Project on increasing time commitment for BMS Dissection in Scotland
3. SPAN Data and Measurement Plan

National Network Management Service: Quality Improvement Plan

Planning		Following the Model for Improvement	
Network: Scottish Pathology Network - SPAN			
Project: Improving BMS Dissection across Scotland			
Planned start date: 18.05.2018	Planned end date: 31/03/2021		
Rationale: Why are you undertaking the project?			
<p>Tissue dissection is routinely undertaken in Histopathology laboratories. Historically, this was undertaken by medical staff. However, demand on laboratories, combined with consultant staff shortages, has resulted in pressure in Pathology departments with meeting patient turnaround time targets.</p> <p>In recent years, non-medical staff, such as Biomedical Scientists (BMS), have been trained to undertake tissue dissection of selected specimen types. Across Scotland, 21% of dissection time commitment is undertaken by BMS.</p>			
Aims statement: What are we trying to accomplish?			
<p>This sets out your project aims and answers the questions how good? By when? This should be something you can measure. (Setting aims).</p> <p>By 2021, dissection time commitment undertaken by BMS will have increased by 10%. This will enable medical time to be released from dissection to diagnostic reporting or other clinical work which will ultimately impact on patient turnaround times</p>			
How do we know that a change is an improvement?			
Measures to monitor the impact of improvement effort. There are three types of measure that might be needed – an outcome measure that links to the aim question but there will also be measures of process that are needed to help understand what is happening during the project and balance measures to evaluate any unintended consequences. A baseline measure will be needed to start with and then a responsive method for continual measuring.	Outcome measure (s): Time commitment for BMS dissection to have increased by 10% Baseline: Time commitment for BMS dissection is 21% across Scotland	Process measures: Facilitate BMS Dissection training school to advance tissue dissection. Develop learning agreement with Boards and dissectors to agree local agreement to pursue BMS dissection.	Balance measures: Evaluate school objectives and ascertain training levels at local level.
What changes can we make that will result in the improvements we seek (improvement)?			

<p>There are many tools that can help with analysing the root causes of problems and identifying opportunities for improvement.</p>	<p>Potential causes:</p> <p>Not enough BMS trained to dissect less complex specimens at Board level.</p> <p>Not enough medical time to be released from dissection to diagnostic reporting or other clinical work.</p>	<p>Improvement ideas:</p> <p>Facilitate BMS Dissection training school to advance tissue dissection.</p> <p>BMS dissection to be progressed at local Board levels, upon signed agreement between SPAN and Boards.</p>
<p>Results To be reported midyear October 2020</p>		
<p>Who is in our project team?</p>		
<p>Role Network Scientific Manager Programme Manager Assistant Programme Manager BMS Dissection Implementation Group</p>	<p>Name Amanda Malham Camilla Young Philli Cottam</p>	

Annexe 7 SPAN Data and Measurement Plan

- Measuring SPAN's performance against the 5 Year Workplan
- Using Quality and Performance Benchmarking data to make local improvements

Description	Example of Measure	Current baseline	Suggest target to aim for	Suggested date
1. Productivity	% of histopathology requests reported in 7 days	Scotland average = 38%	Should this be a Scotland-wide area for focus?	July 2020
2. Productivity	% of post mortem requests with a final report at 30 working days (RCPATH KPI = 90% at 30 days)	Scotland average = 42%	Should this be a Scotland-wide area for focus?	July 2020
3. Productivity	% of reports ready for MDT (clarify which clinics)		Can this data be collected?	
4. Productivity	% of prostate core biopsies reported within 7 calendar days (RCPATH KPI = 80%) Monitor impact on other histopathology requests reported within 7 days: monitor turnaround times	Scotland = 57%	Should this be a local area for focus?	July 2021
5. Technology solutions	Increase % of laboratories utilising voice recognition technology	Scotland =	Should this be a Scotland-wide area for focus?	July 2020
6. Technology solutions	Increase number of laboratories testing digital pathology technology	Scotland =	Should this be a Scotland-wide area for focus?	July 2020
7. Stakeholder engagement	Increase number and range of services/organisations engaged with SPAN	Stakeholder Graph for SPAN event	Increase the range of stakeholders represented at SPAN event and attendance by 10%	December 2020
8. Stakeholder engagement	Reliability with labs participating in all-distribution list	80% labs included	Aim for 100%	March 2021
9. Stakeholder engagement	Number of #pathologycommunity retweets	Average number of retweets per month = 23	Increase by 20%	March 2021
10. Interaction with website	Number of visits per month	Median visits per month =	Increase interaction with the SPAN website by 10%	March 2021
	Length of time on website	Median length of time per visit =		
	Pages viewed per month per visitor	Median pages viewed per month =		
	Number of boards interacting	Increase to all territorial boards		
11. BMS Dissection Training	Increase number of BMS participating in dissection training	May 2020 = Cancelled	Aim for 8 participants	May 2021
12. BMS Dissection	Increase % Total B-E dissection hours carried out by BMS in Scotland	???? in Scotland	Should this be a Scotland-wide area for focus?	May 2021
13. Quality &	% of NHS boards submitting SPAN data by given	June 2019 = 100%	Aim for 100%	June 2020

Description	Example of Measure	Current baseline	Suggest target to aim for	Suggested date
Performance reporting	date			
14. Stakeholder engagement	Feedback generated from the SPAN Annual Event	68% rated the event as excellent in 2019	Aim for 60%	November 2020
15. BMS Dissection Training	Feedback generated by evaluation of training		Aim to improve % meeting learning expectations	November 2020
16. Productivity	% of all SPAN meetings agendas and papers within NNMS agreed timescales		Aim for 95%	December 2020
17. Productivity	% of SPAN minutes issued within NNMS agreed timescales		Aim for 95%	December 2020
