Overview

Introduction

The Scottish Pathology Network (SPAN) held their inaugural event on 3rd November 2017. As part of improving the experience for the next event, feedback was solicited from those who attended, in a paper form questionnaire. This report contains a summary and analysis of the feedback given by attendees.

Overview

The event was highly successful in terms of meeting expectations. With the exception of 5 people, all of the attendees reported that the conference met their expectations. The most frequent method of communication was email, and most people heard about the educational event this way. The average score for the overall event was **4.56** out of 5, which is excellent.

Questions around information about the event

A number of questions in the survey looked into the promotion of the event and the means by which attendees heard about the event. This data is useful for thinking about future promotion of the conference, and so the channel through which attendees receive invites or information about the event was gathered.

The most frequent response given for hearing about the conference was via email. In future surveys, it would be beneficial to ask for the *preferred* method of communication.

129 people attended the event and 89 gave feedback in the form of a response. The response rate for the questionnaire in 2017 is **68.2%**. Attendees included representatives from all Boards that host a Pathology service in Scotland, the Pathology Transformation Board in NHS England, NHS Wales and the Northern Ireland Pathology Network.

Comments

Do you have any further comments or suggestions?

Be careful of product endorsement statements by speakers

Can you distribute the lectures on SPAN website by email?

Collaboration with SPAN and SAH; possibly similar areas of interest

Excellent and v. positive day

Felt there were too many speakers resulting in the lectures/talks being condensed and not going into each topic fully as a consequence. No time thereafter to discuss the topics and ask questions. All a bit rushed.

Get Mike Gray to talk about required working - shared service. An update on digital pathology with Gareth Bryson. Moving to HRHPV - Tracey/Curtis or if the lass here have been selected a representative from team. Muscle biopsies - Scott Maxwell (NHS Lothian)

Give feedback for at start of meeting to rate presentations as we are going through. Liz Mallon was a great public speaker.

Good to keep up plans and developments within NHS Scotland. It is great for grass roots staff to get out and about, networking and hearing about plans.

Good variety of topics

Have a few less speakers so that it doesn't feel rushed

Hear from England, Wales and N Ireland too.

I would have liked more time to complete this after last speaker. Also some pp slides were difficult to read due to font size etc. Would have been useful to have the printed copies of the stats from SPAN data before the talk so they could be seen clearly.

More on data use, QI exercises

More talks from people who are actually involved within the laboratories with this work.

No. 9 - I didn't understand the relevance of this talk. There was quite a lot of jargon used and it didn't seem to fit in with the day, maybe too specific? The other government speaker (No. 5) was better (more of an overview and shorter). There was only one slide that was relevant to pathology. No. 12 very good presentation.

Perhaps it would be good to have separate days for items relevant to scientists and pathologists so that the speakers could have more time. Some of the very interesting presentations were cut short. A list of delegates is a good tool for networking

Poster presentations/display

Presentation slides contrast was poor on some slides making them difficult to read.

Really useful to see what is happening north of the border

Review of pilot and digital pathology and its impact on the service. BMS Dissection: - experiences from the first course.

The venue was very good and excellent transport links. It would be nice for the community if the meeting rotated around the regions, as long as it was near a train station.

There was a lot of information relating to IBMS training pathways, for future events it might be nice to hear about other traineeships such as clinical scientist training and career options

Updates on automated/computational developments, where we are, what we expect in the future.

@lisa_stewart1 outlines how #SPAN can support #pathologycommunity making #qualityimprovements in their #Scotland area

The diagram illustrates the Quality Improvement Support process. It starts with an 'Aim' (SPAN aims to support the pathology community to improve performance, productivity and efficiency of technology by 2021). This leads to 'Primary Drivers' (Stakeholder engagement, Identifying where improvements can be made, Submitting bids) and 'Secondary Drivers' (Communication strategy to engage knowledge of stakeholders, Regular interaction with website, Newsletter, Social media, Use of SPAN tools, Data and Management Plan, Process mapping across services, Key Performance Indicators, Identifying priorities, Use of Other Diagrams, Assistance to present bids). These drivers lead to 'Change ideas' (Support to identify ideas for testing).

Website

Leading up to the event

The SPAN website was used to host the inaugural event information. In the month leading up to the event, the website was visited **1196 times**.

Since the event

The most popular search terms since the event include:

- Dissection school
- Annual report
- How to be a Pathologist in Scotland
- Pathology database
- Allan Wilson cytopathology NHS Lanarkshire address

Conclusions

SPAN held a very successful inaugural event. The strengths of the event gave rise to natural improvements, which build on good practice and good experience.

Some suggestions for the next SPAN event include:

- Experiences from the BMS Dissection training school
- Experiences from other countries
- Further updates on digital pathology
- Update on HPV
- Fewer speakers
- Other career pathways aside from IBMS
- Potential separation of medical/scientific talks
- Venue improvements such as no split screen, more ladies toilets, greater access to refreshments
